
WILDFLOWERS

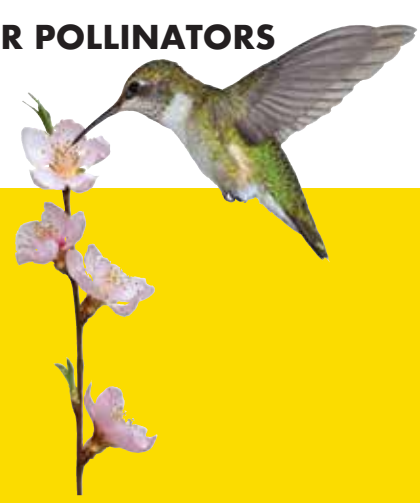
AND MEADOW GRASS MIXTURE

CONTAINS OVER 25 ANNUAL & PERENNIAL WILDFLOWERS

CONTAINS HARD FESCUE FOR SOIL STABILIZATION

ATTRACTS BUTTERFLIES, HUMMINGBIRDS & OTHER POLLINATORS

BEAUTIFUL TO LOOK AT & EASY TO CARE FOR



Jonathan Green Wildflowers and Meadow Grass Mixture is formulated for areas that will provide a food source for pollinators, attracting butterflies, hummingbirds, and bees. This mixture contains a wide variety of annual and perennial wildflowers. Hard fescue aides as a nurse grass to stabilize soil. Use this mix in garden beds, borders, slopes and other natural areas that are not regularly mowed. Perennials should bloom after the first year and then each following year. Annuals will bloom the first year and perhaps the following years if mowed down at the end of the fall season. Use in sunny and partial shade areas in growing zones 2, 3, 4, 5, 6 and 7.

DIRECTIONS

Proper site preparation is important for a successful stand of wildflowers. Wildflowers can be planted early spring to late fall. Sunny, well-drained soil areas work best.

1. Best results will be obtained by planting on loosened, cleared ground. Remove competition by raking and pulling out existing vegetation.
2. If possible, incorporating some organic material such as compost, peat moss or dehydrated manure into the upper soil surface will also improve poor soils and aid in water retention.
3. Seed may be sown by hand or a speader and raked lightly into the soil. Water lightly for a few weeks until plants are established, gradually reducing the waterings. Have patience, flowers will take some time to bloom.
4. As wildflowers establish, remove undesirable weeds that may compete with germinating wildflowers by hand pulling and raking. Flowers should appear in about 60 - 90 days.

- ***Wildflowers can be mowed in late fall, after flowering to aide in re-establishing wildflower areas.***
